

1. Write a Python program to draw a line with suitable label in the x axis, y axis and a title.
Output:

2. Write a Python program to draw a line using given axis values with suitable label in the x axis , y axis and a title.
Output:

3. Write a Python program to plot two or more lines on same plot with suitable legends of each line.
Output:

4. Write a Python program to plot two or more lines with legends, different widths and colors.

Output:

5. Write a Python program to plot two or more lines and set the line markers.

Output:

6. Write a Python program to plot several lines with different format styles in one command using arrays.

Output:

7. Write a Python program to create multiple plots with labels.

Output:

8. Write a Python programming to display a bar chart of the popularity of programming Languages.

Sample data:

Programming languages: Java, Python, PHP, JavaScript, C#, C++

Popularity: 22.2, 17.6, 8.8, 8, 7.7, 6.7

Output:

9. Write a Python programming to create a pie chart of the popularity of programming Languages.

Sample data:

Programming languages: Java, Python, PHP, JavaScript, C#, C++

Popularity: 22.2, 17.6, 8.8, 8, 7.7, 6.7

Output:

10. Write a Python program to draw a scatter graph taking a random distribution in X and Y and plotted against each other.

Output:

11. Write a Python program to draw a scatter plot using random distributions to generate balls of different sizes.

Output:

12. Write a Python program to draw a scatter plot comparing two subject marks of Mathematics and Science. Use marks of 10 students.

Sample data: Test Data:

math_marks = [88, 92, 80, 89, 100, 80, 60, 100, 80, 34]

science_marks = [35, 79, 79, 48, 100, 88, 32, 45, 20, 30]

marks_range = [10, 20, 30, 40, 50, 60, 70, 80, 90, 100]
